Responding to the COVID-19 pandemic presented many challenges to the Health Care for the Homeless (HCH) community. It required service providers to rethink delivery methods and establish or strengthen vital collaborative relationships in order to continue providing needed care to people experiencing homelessness (PEH). However, the pandemic also provided opportunities to transform systems of care because many of the restrictive policies and requirements often associated with barriers to care were temporarily suspended.

After nearly three years, COVID-19 remains a significant public health issue, especially for those who are unvaccinated, with over 400 people dying daily in the United States. The COVID-19 pandemic also showed that there are more effective ways to provide care to vulnerable people. The challenge now is to resist the backward slide to “normal” and take advantage of the opportunity to make permanent these demonstrated improvements to all communities. While COVID-19 remains an ongoing public health risk, this issue brief outlines five “lessons learned” (and related strategies) that have improved systems of care and heightened public health interventions for PEH and can be extended to the broader care environment.

### Participate in Community Partnerships & Engage Trusted Messengers

Keeping strong relationships with community partners—such as public health authorities, Continuums of Care (CoCs), homeless services, public housing authorities, area hospitals, emergency response teams, and many elected officials—expanded the collective capacity to deliver services and make more efficient use of resources and expertise.

Working with providers, community health workers, consumer leaders, and others who are trusted messengers to deliver health education messages is effective in engaging clients into services.

<thead>
<tr>
<th>Successful Strategies</th>
<th>Quotes from the Field</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Hold regular “COVID Partnership coordination” calls with other service providers</td>
<td>“We’re getting more vaccines into arms just by being consistent. It’s the HCH culture to know our patients’ names and to follow up. We’re not a flash in the pan—we continue to go out and build trust.” - Mary Tornabene, MS, APRN, FNP-BC: Shelter Based Project Manager, Heartland Alliance Health in Chicago, IL</td>
</tr>
<tr>
<td>• Create partnerships with local organizations (e.g., soup kitchens/meal programs) to offer snacks during vaccine events</td>
<td></td>
</tr>
<tr>
<td>• Share data across service providers/systems to facilitate more responsive, effective service delivery, and use of limited resources</td>
<td></td>
</tr>
</tbody>
</table>
Successful Strategies

- Include people with lived experience in systemic decision-making and leadership roles
- Schedule Town Hall meetings/listening sessions with consumers and staff to promote health education
- Expand opportunities for staff & consumer leaders to be vaccine ambassadors
- Identify trusted locations within communities to hold vaccine clinics (and other services)
- Schedule regular outreach hours and consistently follow up with clients to boost vaccine acceptance as well as engage in wider range of care
- Access and share data through Information Exchanges to improve individual client health and drive changes at the population health level
- Build trust by being trustworthy; be persistent, consistent, and humble

Quotes from the Field

“We worked with the county, local shelters, and other homeless service providers to open 130 hotel placements where we provide the medical services to those clients. The county has been key to our responses, so when it came time for the vaccine, they were already at the table to help us.” – Melissa Sandoval, MD, Chief Medical Officer, Circle the City, Phoenix, AZ

“We found clients were hesitant about the vaccine, but when they talk to providers they know and trust, they felt they could ask questions, be frank, and say ‘we don’t trust the health system based on our history.' For people we have an ongoing relationship with—that led to a number of patients agreeing to come in and get vaccinated.” – Pat DeShields, Chief Executive Officer, Project H.O.P.E., Inc., Camden, NJ

“Medical providers taking the time to provide education in settings that are not just the exam room and talking in terms people can understand makes such a difference.” - David Peery, National Consumer Advisory Board (NCAB) Co-Chair, Miami, FL

Integrate Health Care & Support Services

Incorporating low-barrier, trauma-informed health care and support services at congregate and non-congregate shelter programs and in permanent housing improves engagement in care and confirms the need for expansions of medical respite care programs.

Successful Strategies

- Deliver primary care, behavioral health, and support services to clients staying in shelters, alternate care sites, housing programs, and unsheltered spaces
- Staff mobile/street medicine teams with clinicians, peers, and outreach/case managers who can support clients wherever they live

Quotes from the Field

“While shelters and clinics often operate in silos, COVID-19 has shown that a joint effort can truly save lives.” – Jeffrey Norris, MD, Chief Medical Officer, Father Joe’s Village, San Diego, CA
### Successful Strategies

- Establish formal partnerships (e.g., through MOUs) with shelters and other homeless service providers
- Create standards for shelter health, including environmental cleaning and ventilation standards
- Offer after-hours clinics within shelters using in-person or telehealth services
- Adopt harm reduction approaches to engage/retain more vulnerable people in care and reduce overdoses, suicides, and other harmful outcomes
- Convert congregate shelters to non-congregate care sites by purchasing/leasing hotels/motels or other venues
- Start/expand medical respite care programs to provide ongoing care
- Create safer and healthier encampments by spacing tents, adding hygiene stations, and providing a wide range of onsite services

### Quotes from the Field

“We developed an inpatient hotel assessment and are asking everyone about substance use, alcohol, opioid use, and nicotine. We offer Suboxone to anyone who says yes to OUD.” – Catherine Crosland, MD, Medical Director of Emergency Response Sites, Unity Health Care, Washington, DC

“‘Normal’ sucked for our clients, so we can’t go back to that. Being in hotels has been a game-changer and such a benefit for our clients. Losing access to hotels and going back to congregate settings would be a huge loss.” – Tyler Gray, MD, Senior Medical Director – Community Sites, Health Care for the Homeless, Baltimore, MD

“Our protective action motels have been a prime way to vaccinate clients as they are staying long-term in individual motel rooms. As these resources start to go offline, or if shelters move away from a 24/7 model, it will definitely be more difficult to engage with folks.” – Jenna Salerno, RN, Nurse Manager, Colorado Coalition for the Homeless, Denver, CO

“We get a call and meet them where they are on the streets. They can see that people care about them, which breaks down walls and builds hope.” Keith Belton, Peer Support Advocacy, The Night Ministry, Chicago, IL

Provide Virtual Care/Telehealth

Expanding virtual care/telehealth into shelters, housing programs, and encampments—as well as using technology in creative ways—lowers rates of missed appointments and improves access to care.

<table>
<thead>
<tr>
<th>Successful Strategies</th>
<th>Quotes from the Field</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Create a “telehealth room” at the clinic or shelter with an iPad or other technology where clients can connect with providers</td>
<td>“For our behavioral health staff, the audio-only offers our more vulnerable clients a bit of privacy, reduces barriers and stigma, and creates new communication opportunities.” – <strong>Amber Price</strong>, Health Advocate, Partnership Community Health Center, Appleton, WI</td>
</tr>
<tr>
<td>• Locate health care staff on site to assist with telehealth connectivity and appointment setup to provide a warm hand-off and ensure a successful televisit</td>
<td>“Based on our telehealth needs assessment and using our COVID-19 funds, we are adding iPads to our outreach so we can offer video visits to our unsheltered clients as well as telehealth rooms in shelter-based clinics to better connect clients to primary and specialty care. We are also hiring a Director of Telehealth so we can bolster a full range of telehealth services that will increase access to care.” – <strong>Nelson Gonzalez</strong>, DHA, MPH, Grants Project Manager, Harris Health System, Health Care for the Homeless Program, Houston, TX</td>
</tr>
<tr>
<td>• Use audio-only visits to reach more vulnerable clients or those with limited phones/technology and decrease missed appointment rates</td>
<td></td>
</tr>
<tr>
<td>• Maximize flexible originating/distant site policies to create more onsite service space and provide greater options for clients and staff offsite</td>
<td></td>
</tr>
<tr>
<td>• Invest in portable technology that can be taken into encampments and other unsheltered spaces</td>
<td></td>
</tr>
<tr>
<td>• Facilitate client access to free/low-cost phones through the FCC’s Lifeline program</td>
<td></td>
</tr>

Reversing pervasive racial disparities in access to care and health outcomes requires an intentional focus to examine data and advance anti-racist service approaches.

**Successful Strategies**

- Establish baseline demographic data by race/ethnicity, language, gender identity, and other demographics to identify existing disparities
- Implement an action plan that has specific strategies and goals for reducing existing disparities. Continually evaluate progress and reassess needed actions
- Hire and promote staff as diverse as the clients being served, and create opportunities for equitable advancement
- Actively consider who is not being served (or geographic areas without access to services) and adjust partnerships or service provisions accordingly

**Quotes from the Field**

“If equity is not tracked, we will revert to a system of oppression. We measure what we care about.” – Naomi Windham, FNP, Hennepin County, Minneapolis, MN

“We have been looking at everyone we served in the past 12 months and whether they’ve been vaccinated. We recognized there was a disparity between Black and White patients so we started a peer ambassador program to do more targeted outreach. Just in the first few weeks we narrowed that gap, which is great.” – Denise De Las Nueces, MD, MPH, Chief Medical Officer, Boston Health Care for the Homeless Program, Boston, MA

“We track the percentage of residents at the shelter who have been vaccinated and look for racial disparities. If one group is lower, we deploy staff to focus on education and outreach and answer questions. We publish all this data on a systems dashboard.” – Martha Trevey, DNP, APRN, Family Nurse Practitioner and Clinical Services Manager, Hennepin County Health Care for the Homeless, Minnesota, MN

Ongoing Challenges

The COVID-19 pandemic caused service delivery to evolve and adapt as many communities demonstrated how quickly they could improve systems of care, mobilize crisis responses in partnership with others, and expand permanent housing opportunities. Urgently advancing macro-level system changes to housing and health care could end homelessness; unfortunately, many communities have chosen to return to pre-COVID practices and are not implementing these “lessons learned” as they move on from the pandemic. The HCH Community should advocate strongly to seize any remaining opportunities to improve systems of care.
